Practical -1

Create a **visualization report** in IBM Cognos Analytics using the Great outdoors data module. The report should visually represent the analyzed data through various charts and graphs to make insights easier to understand. Use both traditional and advanced charts available in Cognos 11.0 and 11.1, such as barchart, piechart, linechart area chart, river chart etc. Additionally , demonstrate the use of microcharts to display summarized and comparative data in compact form. These visualizations should help analyze patterns, trends , and key insights effectively for better decision making .

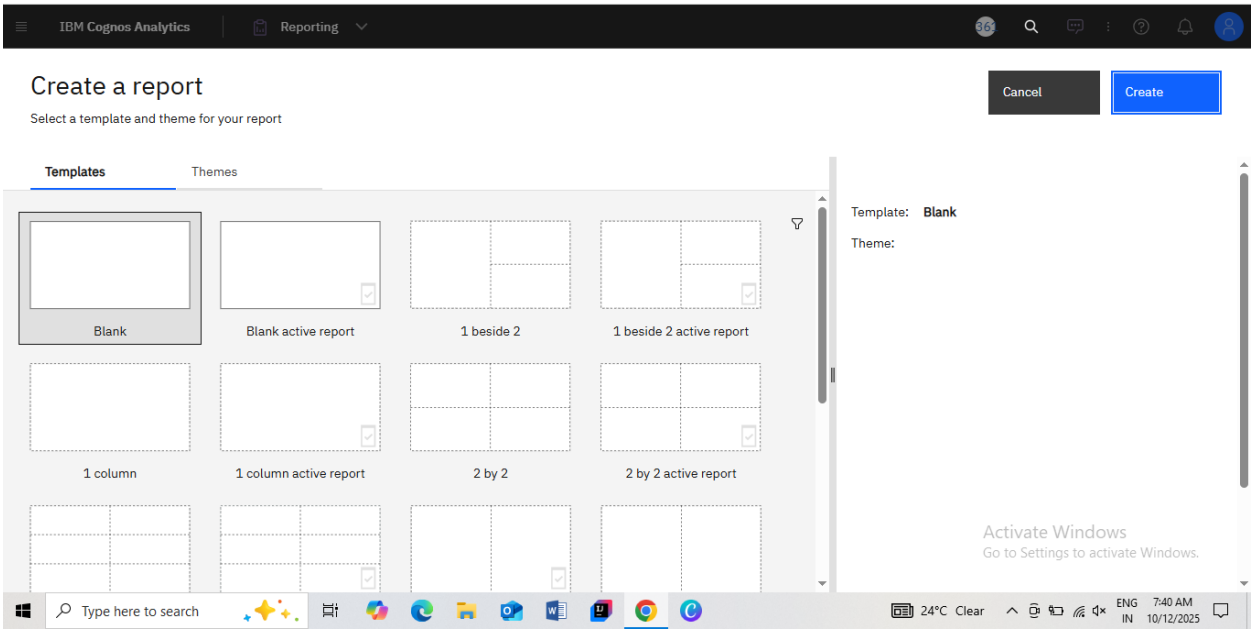

Step 1: Login the IBM Cognos and then click Launch

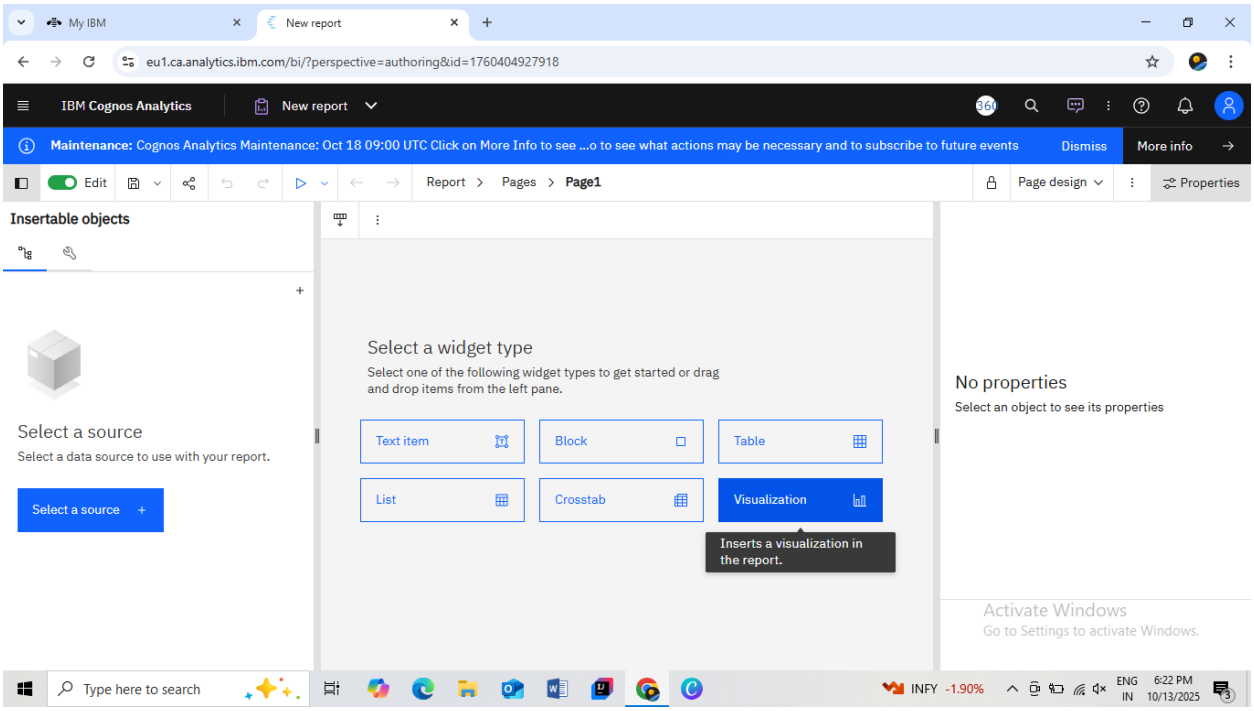

Step 2: Click the three dots and then click new and after that Report.

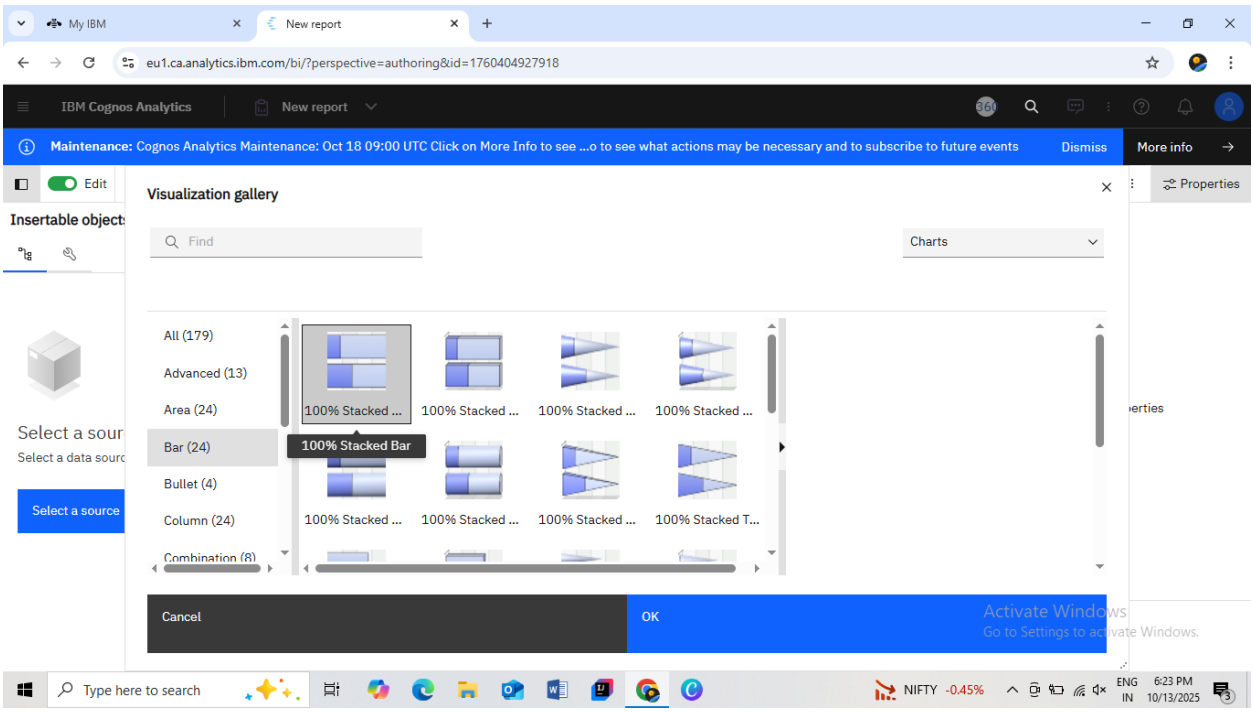

Step 3: We choose the template.

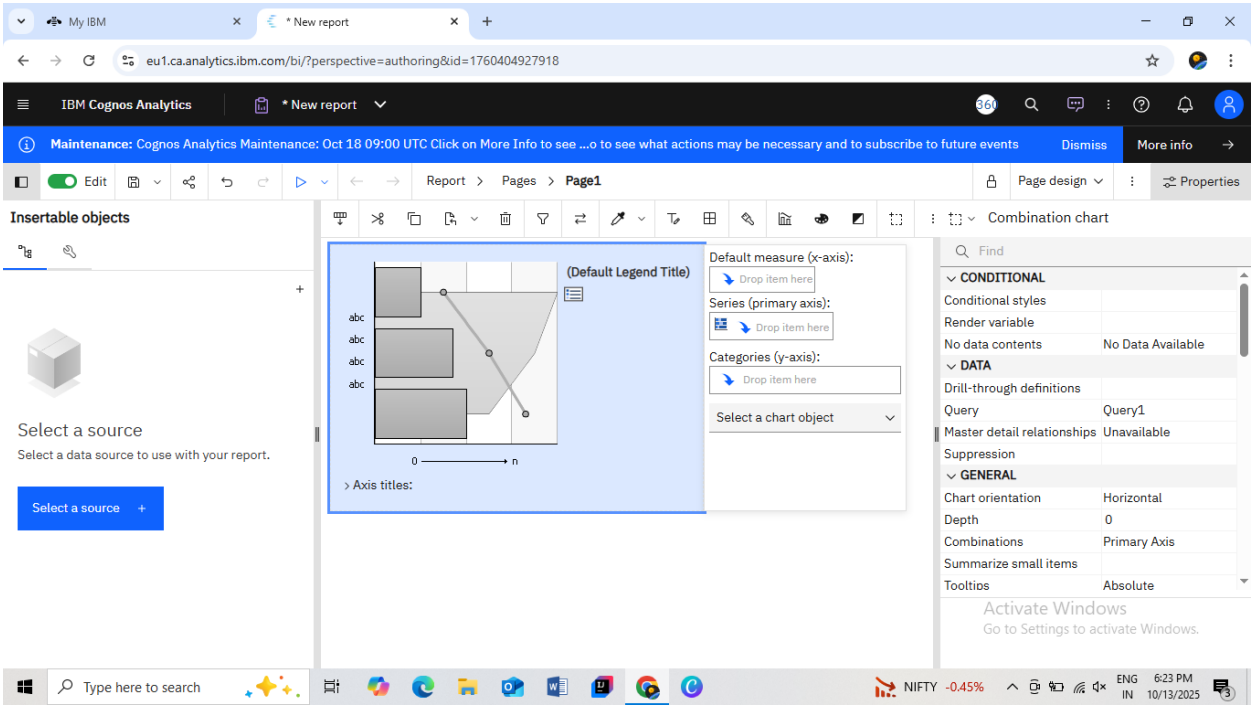

Step 4: Click on Select a Source option then click on the Visualization in present in widget type.

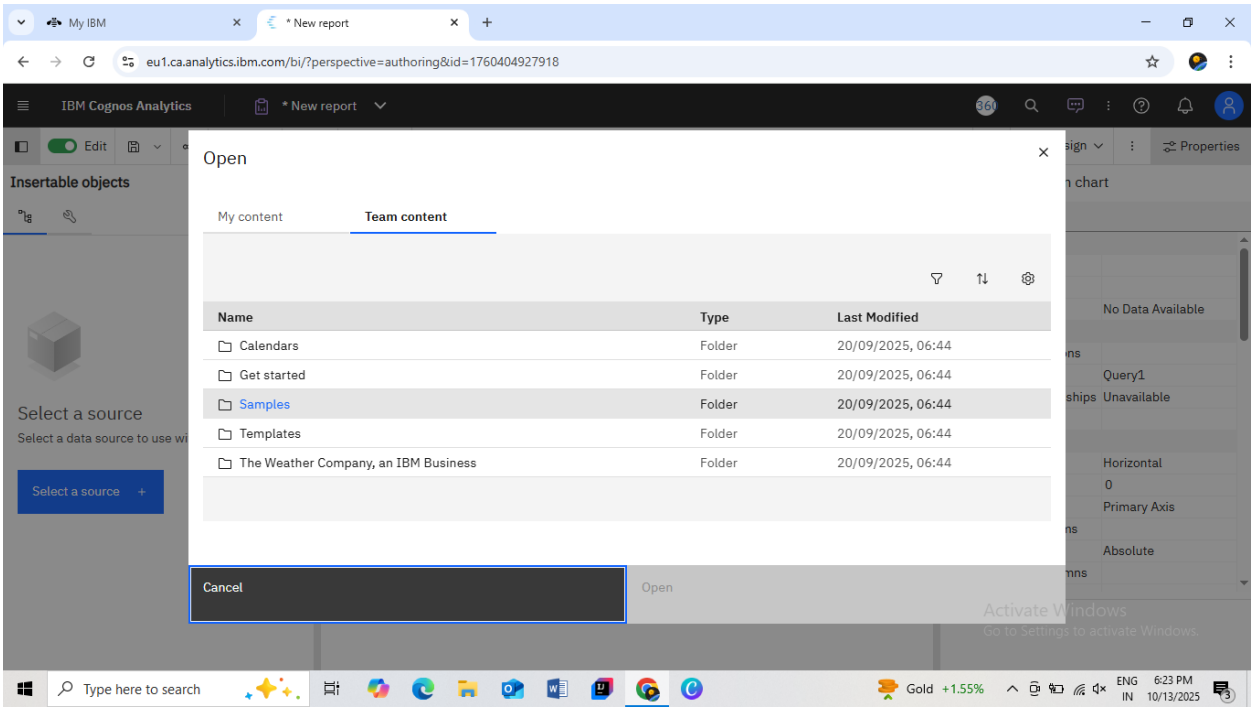

Step 5: After click on visualization we click on Bar option then select 100% Stacked bar and after that click ok button.

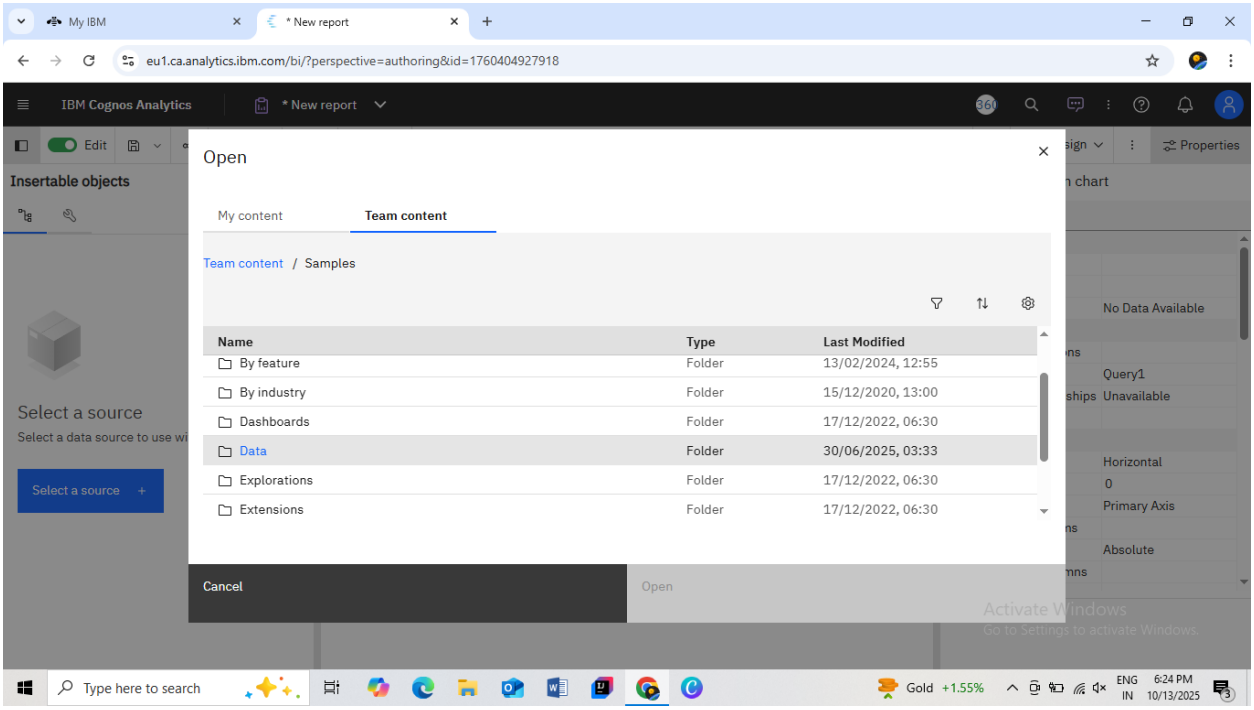

Step 6: After that Stacked Bar chart create and vacant box are appear in X-axis , Primary axis , Y-axis , then click on Select a source option to add data items.

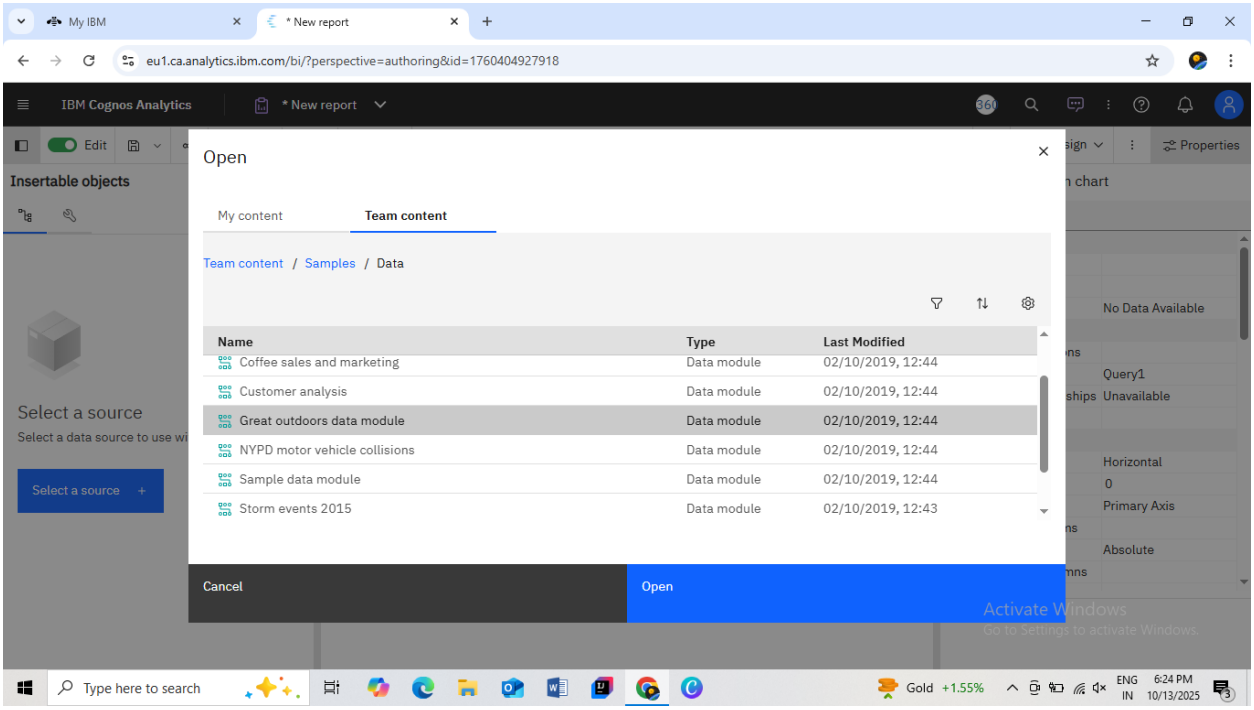

Step 7: Click on Samples option present in Team content .

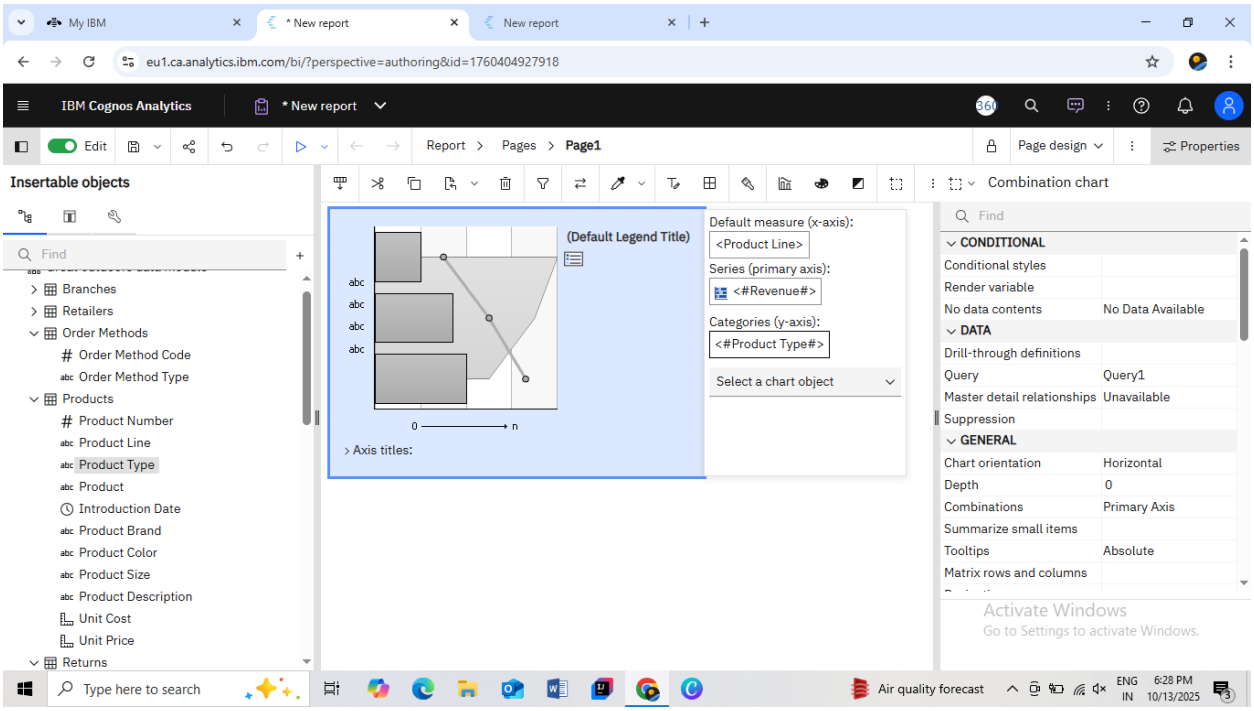

Step 8: Click on Data option present in Team content .

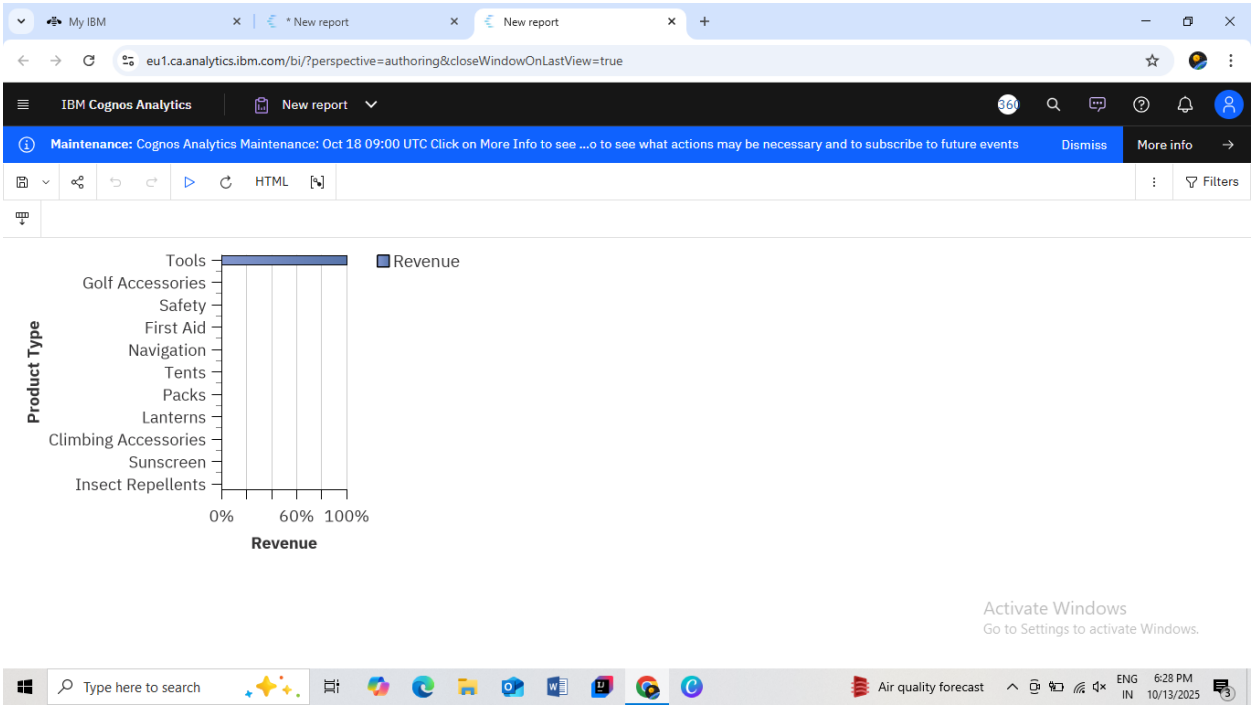

Step 9: Click on Great outdoors data module option present in Team content .

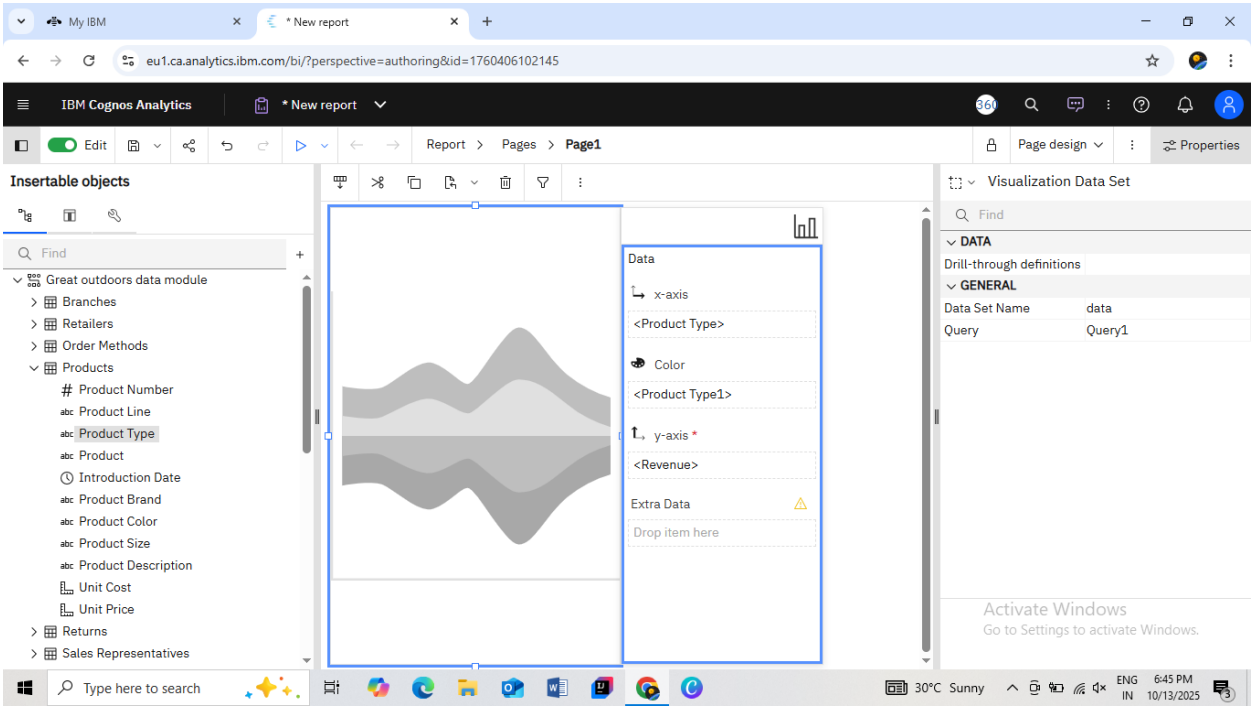

Step 10: After that fill the vacant box such as :- put Product line in X- axis , Revenue in primary axis and Product type in Y- axis

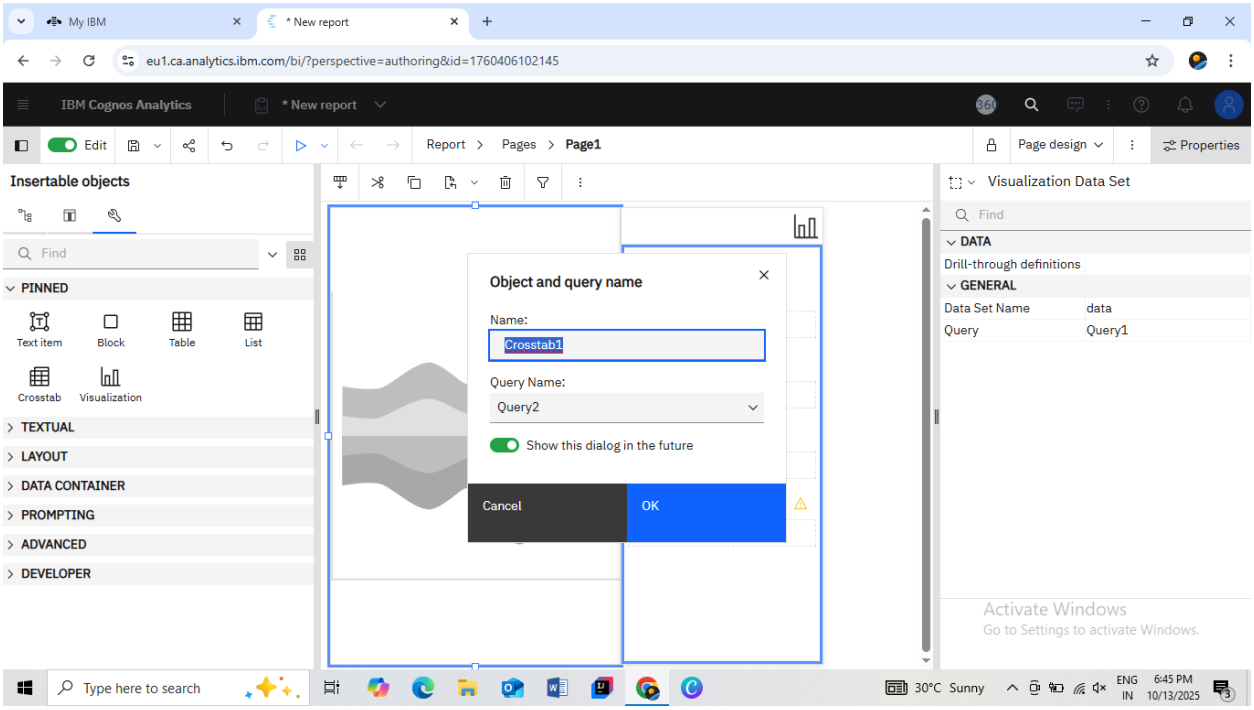

Step 11: Click Run option and then we get report.

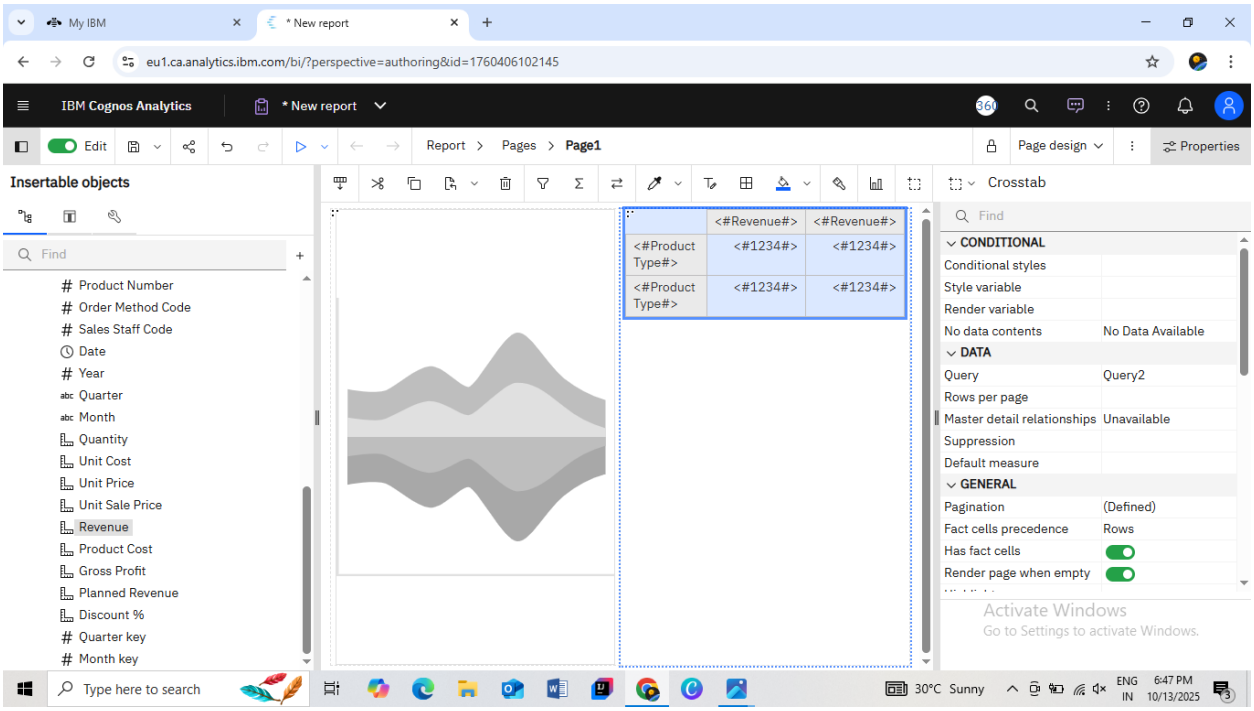

Step 12: All process are same, but here we can choose river chart and fill the vacant box such as :- put Product Type in X-axis , Product Type1 in Color and Revenue in Y- axis.

Step 13: We choose the Crosstab option and click ok button.

Step 14: After that we put the Product Type in Column and put Revenue in Row in the crosstab which we create in previous step.

Step 15: After that we click on the Run option and display the report.
